CSE4939W CSE Design Laboratory

Project Description with Objectives and Goals

The first writing assignment asks you to write about the project on the high level. Specifically, each team member will write document, in your own words, answering the following questions. Please write it as a coherent document, instead of simply answers to the questions.

Suggested structure

You can organize your document into five sections:

- **Introduction**, where you can include your thoughts about questions 1 and 2.
- **Approaches/Methodology**, where you can write about your thoughts about question 3. Feel free to include multiple subsections. For instance, a project typically involves multiple techniques. Describe the different techniques that you think are relevant. Feel free to look up from the Internet, textbooks, AI tools, but your description has to be your own. Feel free to add figures/diagrams that you think will be helpful, which count toward pages.
- **Collaboration plan,** write your plan for collaboration among your team members; see question 4.
- **Coordination plan,** write your plan for coordination with your sponsor and advisor; see question 5.
- **Conclusion.** Do a brief summary of the document.

Length

4 pages (~1200 words) excluding works cited.

Revisions

You will do peer-review of one of your teammate's documentation with the rubric below. You will then revise your documentation, at which point I will grade it using the same rubric.

Note that the grade you get during peer-review is not factored into your grade - there is no incentive to give higher or lower marks to your teammates. There is incentive to giving accurate marks - it will help you become a better writer, and your teammates will be able to get a better grade if they have good feedback.

Rubric

• Content (50%)
– Clearly describes the philosophy, steps, examples, and feasibility of this methodology with regards to this project

• Style (20%)

– Tone is professional and clear

• Citations (20%)

– Paper contains at least 5 appropriate citations. Citations are properly and consistently sited and included in a works cited section at the end of the paper.

• Formatting (10%)
– Paper is 4 pages, double-spaced with 1 inch margins.

– Formatting is consistent and professional throughout.

Questions:

1. Overview of the project. What is the project about? Why do you think the project is interesting/important? What do you think are the potential challenges to you?

2. The goals that you would like to achieve. Ideally you could describe the milestones you would like to achieve by the end of the year.

3. The main approaches you plan to use. Based on your current understanding of the project, describe the main steps you would like to take and some details on what techniques will be involved for each step. What are alternative approaches?

4. Describe the collaboration plan among the team members. Specifically, who will be in charge of what, how do you plan to use the scrum project management, how do you plan to do code review, your plan for sprints. One management strategy that has worked well in past senior design projects is to have a primary member and secondary member in charge of a task.

5. Describe your plan to coordinate with the advisor and the sponsor. Specifically, what help do you think the advisor and sponsor can provide to you?
